

the DC funds

Property – active
as at 30 June 2017

fund objective

To provide long-term capital growth in excess of the UK price inflation by investing in commercial property, directly (mainly) in the UK and/or indirectly via property companies listed around the world. The fund aims to outperform the benchmark over the long-term.

market commentary

The UK property market remained steady amid political uncertainty. Notably, foreign investors continued to invest in commercial real estate owing to a devaluation of sterling as well as an improvement in rental trends. The global property market advanced during the second quarter of 2017, and these gains were largely driven by eurozone countries, especially Spain and Germany. In the US, property markets remained subdued amid uncertainty regarding Donald Trump's pro-trade policies. In Hong Kong, the government imposed additional cooling measures by reducing the ratio of allowable loans on residential properties as well as capping construction loans. Despite these measures, housing prices continued to rise on the back of robust demand.

risk rating

Very Low Low Low/Medium Medium Medium/High High Very High

All investments carry a level of risk. You need to decide how much of each type of risk you're prepared to take. The table below gives an overview of some of the risks associated with this fund.

risk type	description of risk	level of risk for this fund
Capital Risk	This is the risk that the value of your investments will fall. The younger you are, the less worried you might be about capital risk, because your investments have time to recover their value before your retire.	Med High
Inflation Risk	This is the risk that the value of your investments will grow more slowly than prices rise. Inflation can be a problem for pension savings invested in cash funds particularly if the interest you're earning is less than the rate of inflation.	Med
Pension Conversion Risk	The price of an annuity changes on a regular basis. This means that the amount of income you can secure with the same amount of money will change. Pension conversion risk is the risk that the amount of income you can buy drops before you retire, because your money is invested differently to annuity funds. That's why putting more of your DC pension pot into bonds to try to match annuity prices as you get closer to retirement age can help protect against this risk.	High

About the factsheet

It is important to remember that the price of units can go down as well as up. There's no guarantee that you'll get back the amount that goes into your DC pension pot. Changes in rates of currency exchange, particularly where overseas securities are held, could also affect the value of your investment.

All funds are provided through FIL Life Insurance Ltd and may invest in securities issued by or hold deposits with HSBC Holdings plc and associated companies.

Valuation time: Business days at 5:00pm (UK time)

Dealing Process: The cut off time for switch instructions is 2:00pm each business day.
