# the DC funds

North American Equities - passive
as at 31 December 2020

## fund objective

To provide long-term capital growth in excess of UK price inflation by investing predominantly in North American listed shares. The fund aims to perform in line with the benchmark as closely as possible.

Past performance isn't a guide to future performance. The figures are shown in sterling and have been calculated using actual returns since the introduction of the current DC fund range.

**Source:** Morningstar, FIL Life Insurance Ltd. Single priced (i.e. no bid/offer spread), gross income reinvested and gross of fees. Indicative prices have been used if a portfolio valuation fell on a non-trading day. The fund was launched on 1st March 2018, but links to an underlying fund which has been existence for a number of years. Before 1st March 2018, performance is simulated based on data provided by Legal and General, the underlying fund provider. Thereafter, returns are produced by Fidelity on a monthly basis.

### market commentary

US equities rose over the fourth quarter and continued to recover, fuelled by record levels of stimulus, Joe Biden's victory in the US presidential election and major breakthroughs announced by COVID-19 vaccine manufacturers. Despite the resurgence in new virus cases over the quarter, investors are hopeful that the world will overcome the pandemic. Tests by Pfizer and BioNTech showed 90% efficacy for their vaccine. Moderna announced a 95% success rate for its vaccine, followed by AstraZeneca/Oxford. High-growth technology stocks witnessed volatility as the market rotated into cyclical stocks in November, post positive vaccine news and as US third quarter earnings posted better than expected results. The US Federal Reserve continued its lower-for-longer interest rate scenario. Energy, financials and commercial services were the best performing sectors over the quarter.

## risk rating

■ Very Low ■ Low ■ Low/Medium ■ Medium ■ Medium/High ■ High ■ Very High
All investments carry a level of risk. You need to decide how much of each type of risk
you're prepared to take. The table below gives an overview of some of the risks associated with this fund.

| risk type                     | description of risk   | level of risk for<br>this fund |
|-------------------------------|---|--------------------------------|
| Capital Risk                  | This is the risk that the value of your investments will fall. The younger you are, the less worried you might be about capital risk, because your investments have time to recover their value before your retire.   | High                           |
| Inflation Risk                | This is the risk that the value of your investments will grow more slowly than prices rise. Inflation can be a problem for pension savings invested in cash funds particularly if the interest you're earning is less than the rate of inflation.   | Med                            |
| Pension<br>Conversion<br>Risk | The price of an annuity changes on a regular basis. This means that the amount of income you can secure with the same amount of money will change. Pension conversion risk is the risk that the amount of income you can buy drops before you retire, because your money is invested differently to annuity funds. That's why putting more of your DC pension pot into bonds to try to match annuity prices as you get closer to retirement age can help protect against this risk. | High                           |

### About the factsheet

It is important to remember that the price of units can go down as well as up. There's no guarantee that you'll get back the amount that goes into your DC pension pot. Changes in rates of currency exchange, particularly where overseas securities are held, could also affect the value of your investment. Although the funds can typically be bought and sold on a daily basis, if an exceptional amount of withdrawals are requested, the fund manager may need to delay when you can access your holdings. All funds are provided through FIL Life Insurance Ltd and may invest in securities issued by or hold deposits with HSBC Holdings plc and associated companies.

The Trustee can change the underlying managers or funds at any time without member consent or prior notification.

Valuation time: Business days at 5:00pm (UK time)

Dealing Process: The cut off time for switch instructions is 2:00pm each business day.
