# The DC Funds

#### Global Bonds - active as at 31 December 2022

#### **Fund objective**

To provide long-term capital growth in excess of UK price inflation. The fund aims to have less capital risk than an equities based fund.

# **Fund Facts**

Launch Date: 2/3/2015

Fund size: £179.61m

Price Per Share: 259.1p

Base Currency:

Does this fund form part of an HSBC default strategy?

Yes - Flexible Income Strategy, Lump Sum Strategy

Charges:

**GBP** 

Inv Mgmt Charges: 0.00% Additional Charges: 0.02%

HSBC pays the investment management charges – not you. However, there may be costs within some of the funds and these will be reflected in the unit price. These nominal costs are variable and are likely to be between nil and 0.2% a year.

### Current Underlying Fund(s):

50% M&G Total Return Credit Fund

50% Newton Global Dynamic Bond Fund

#### **Current Benchmark:**

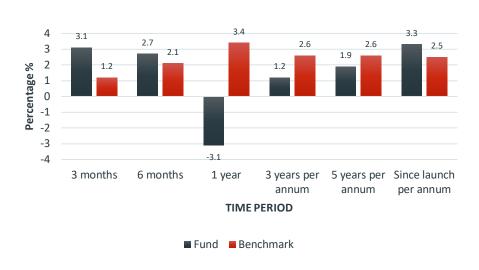

SONIA +2% (per annum over a rolling 5 year basis)

#### Volatility (% per annum):

|            | o rouro | 0 100 |
|------------|---------|-------|
| und:       | 4.8     | 3.9   |
| Benchmark: | 0.2     | 0.2   |

Annualised volatility: a measure of how variable returns for a fund or comparative market index have been around their historical average (also known as "standard deviation"). Two funds may produce the same return over a period. The fund whose monthly returns have varied less have a lower annualised volatility and may be considered to have achieved its returns with less risk. The calculation is the standard deviation of monthly returns presented as an annualised number. Volatility for funds and indices are calculated independently of each other.

# **Fund Performance**

# Note

Total fund performance is made up of a composite of all the current and historic underlying investment manager(s) fund arrangement(s). As such, the longer-term performance shown may not solely reflect that of the current investment manager fund arrangement(s) for this fund. Past performance is not a guide to future performance. The figures are shown in Sterling and have been calculated using actual returns since the introduction of the current DC fund range.

# **Market Commentary**

Global fixed income markets remained volatile but registered positive returns over the quarter; German bunds were the only exception. Bond markets rallied in October and November as investors appeared to bet that easing inflation and slowing growth would eventually force global central banks to pursue a slower pace of tightening. However, markets lost some ground in December amid worries that easing mobility restrictions and a complete reopening of China could keep inflation higher for longer. The Bank of Japan (BoJ), which moved its 10-year bond yields ceiling to 0.5% from 0.25% as part of its yield curve control programme, also sparked a sell off in sovereign bonds across regions. In December, major central banks slowed the pace of interest rate hikes, but stuck to an overarchingly hawkish policy stance. In the corporate credit space, credit spreads tightened, and bonds posted positive returns, with high yield bonds outperforming their investment grade counterparts. Credit markets appeared resilient and risk sentiment improved as investors were hopeful of a slowdown in the pace of global monetary policy tightening and relatively stable corporate fundamentals. #### For members of the HSBC Bank (UK) Pension Scheme

# Risk rating Very low Low Low/medium Medium Medium/high High Very high All investments carry a level of risk. You need to decide how much of each type of risk you're prepared to take. The table below gives an overview of some of the

| Risk type               | Description of risk   | Level of risk for this fund |
|-------------------------|---|-----------------------------|
| Capital Risk            | This is the risk that the value of your investments will fall. Investors in higher capital risk funds should expect to see above average growth over the long term, but might see big falls in value in the short term. The younger you are, the less worried you might be about capital risk, because your investments have time to recover their value before you retire. Higher capital risk funds may be less suitable if you are close to retirement and want more certainty.  | M                           |
| Inflation Risk          | This is the risk that the value of your investments will grow more slowly than prices rise. Inflation can be a problem for pension savings invested in cash or bond funds particularly if the interest you're earning is less than the rate of inflation and you are some way from retirement.  | M                           |
| Pension Conversion Risk | The price of an annuity changes on a regular basis. This means that the amount of income you can secure with the same amount of money will change. Pension conversion risk is the risk that the amount of income you can buy drops before you retire, because your money is invested differently to annuity funds. That's why, if you wish to buy an annuity to provide a regular income through retirement, putting more of your DC pension pot into bonds to try to match annuity prices as you get closer to retirement age can help protect against this risk. If you wish to continue investing your pension savings during retirement and access drawdown then this is less of a concern. | M                           |

#### About the factsheet

risks associated with this fund

It is important to remember that the price of units can go down as well as up. There's no guarantee that you'll get back the amount that goes into your DC pension pot. Changes in rates of currency exchange, particularly where overseas securities are held, could also affect the value of your investment. Although the funds can typically be bought and sold on a daily basis, fund managers may need to delay when you can access your holdings in a fund(s) due to exceptional market circumstances. All funds are provided through FIL Life Insurance Ltd and may invest in securities issued by or hold deposits with HSBC Holdings plc and associated companies. The Trustee can change the underlying managers or funds within this fund, or decide to withdraw or replace the fund at any time, without member consent or prior notification. This factsheet should be read alongside the investment guide.

Making fund choices is an important decision that could have a significant effect on your benefits. This factsheet has been produced to provide you with fund information and is not designed to provide advice or a recommendation on the suitability of an investment for your personal financial circumstances. The Trustee cannot give you financial advice about your fund choices. Consider taking independent financial advice before making any investment decisions.

Valuation time: Business days at 5:00pm (UK time)

Dealing Process: The cut off time for switch instructions is 2:00pm each business day.
