100% HSBC Islamic Global Equity Index Fund

Current Benchmark:
100% Dow Jones Islamic Titans 100 (GBP) Index

Volatility (% per annum):

3 Years	5 Years	
Fund:	14.5	14.3
Benchmark:	14.5	14.2

Annualised volatility: a measure of how variable returns for a fund or comparative market index have been around their historical average (also known as "standard deviation"). Two funds may produce the same return over a period. The fund whose monthly returns have varied less have a lower annualised volatility and may be considered to have achieved its returns with less risk. The calculation is the standard deviation of monthly returns presented as an annualised number. Volatility for funds and indices are calculated independently of each other.

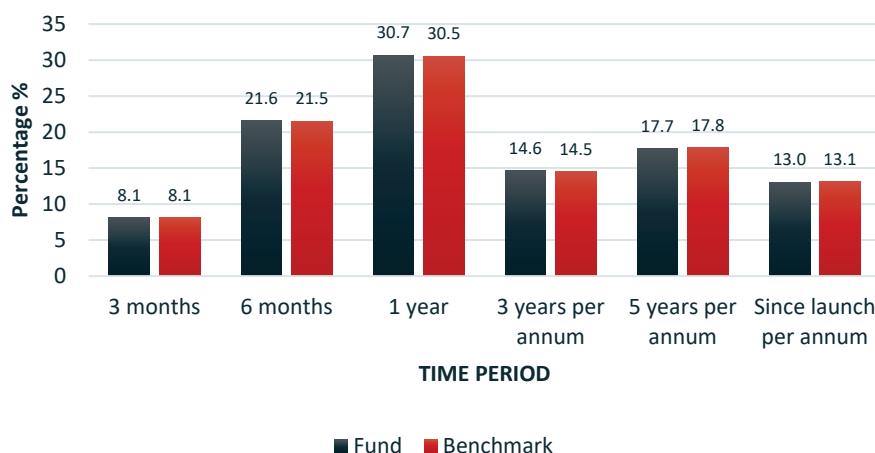

Fund objective

To provide long-term capital growth by investing in global listed shares in a Shariah compliant manner. Over the long term the fund aims to perform in line with the benchmark as closely as possible and provide growth above inflation.

Fund description

The Fund currently invests in a portfolio of company shares on a global basis in line with a stated index, which are selected using investment principles consistent with Shariah Law (Islamic law). For example, Islamic Finance prohibits interest, transactions involving uncertainty, speculation and gambling. Islamic Finance requires both parties in any financial transaction to share the associated risks and profits. Investment in certain industries (with a 5% revenue threshold) is also prohibited, such as alcohol, pornography, gambling and pork-based products, where it is admissible, a purification cost is deducted.

Fund Performance

Note

Past performance is not a guide to future performance. The figures are shown in Sterling and have been calculated using actual returns since the introduction of the current DC fund range.
Source: FIL Life Insurance Ltd. Single priced, gross income reinvested and net of fees. Indicative prices have been used if a portfolio valuation fell on a non-trading day.

Market Commentary

Equities gained over the quarter as resilient economic data and robust corporate earnings supported sentiment. Markets started on a weak note as elevated inflation, particularly in the US, led investors to scale back expectations around interest rate cuts in developed markets. However, markets rebounded in May and June as signs of easing inflation supported prospects for monetary policy easing. At a regional level, equities in the US and UK gained strongly. European markets lagged due to the surprise announcement of snap French elections, while Japanese equities underperformed due to monetary policy uncertainty and the weak yen. Elsewhere, emerging markets edged higher and outperformed developed markets, led by Taiwanese equities, which are exposed to the artificial intelligence (AI) theme. At a sector level, information technology and communication services gained the most due to the optimism around AI. Source: Fidelity. This is general market commentary and should not be considered as advice.

Risk rating

Very low Low Low/medium Medium Medium/high High Very high

All investments carry a level of risk. You need to decide how much of each type of risk you're prepared to take. The table below gives an overview of some of the risks associated with this fund

Risk type	Description of risk	Level of risk for this fund
Capital Risk	This is the risk that the value of your investments will fall. Investors in higher capital risk funds should expect to see above average growth over the long term, but might see big falls in value in the short term. The younger you are, the less worried you might be about capital risk, because your investments have time to recover their value before you retire. Higher capital risk funds may be less suitable if you are close to retirement and want more certainty.	H
Inflation Risk	This is the risk that the value of your investments will grow more slowly than prices rise. Inflation can be a problem for pension savings invested in cash or bond funds particularly if the interest you're earning is less than the rate of inflation and you are some way from retirement.	M
Pension Conversion Risk	The price of an annuity changes on a regular basis. This means that the amount of income you can secure with the same amount of money will change. Pension conversion risk is the risk that the amount of income you can buy drops before you retire, because your money is invested differently to annuity funds. That's why, if you wish to buy an annuity to provide a regular income through retirement, putting more of your DC pension pot into bonds to try to match annuity prices as you get closer to retirement age can help protect against this risk. If you wish to continue investing your pension savings during retirement and access drawdown then this is less of a concern.	H

About the factsheet

It is important to remember that the price of units can go down as well as up. There's no guarantee that you'll get back the amount that goes into your DC pension pot. Changes in rates of currency exchange, particularly where overseas securities are held, could also affect the value of your investment. Although the funds can typically be bought and sold on a daily basis, fund managers may need to delay when you can access your holdings in a fund(s) due to exceptional market circumstances. All funds are provided through FIL Life Insurance Ltd and may invest in securities issued by or hold deposits with HSBC Holdings plc and associated companies. The Trustee can change the underlying managers or funds within this fund, or decide to withdraw or replace the fund at any time, without member consent or prior notification. This factsheet should be read alongside the investment guide.

Making fund choices is an important decision that could have a significant effect on your benefits. This factsheet has been produced to provide you with fund information and is not designed to provide advice or a recommendation on the suitability of an investment for your personal financial circumstances. The Trustee cannot give you financial advice about your fund choices. Consider taking independent financial advice before making any investment decisions.

Valuation time: Business days at 5:00pm (UK time)

Dealing Process: The cut off time for switch instructions is 2:00pm each business day.
