

# the DC funds

Property – active  
as at 30 September 2020

## fund objective

To provide long-term capital growth in excess of the UK price inflation by investing in commercial property, directly (mainly) in the UK and/or indirectly via property companies listed around the world. The fund aims to outperform the benchmark over the long-term.

## market commentary

Global property markets were negative in sterling terms as the US dollar weakened against the pound. At a sub-sector level, industrials was the leading gainer, while hotels and retail lagged. From a country perspective, the US property market was flat over the quarter. It remains supported by record levels of stimulus provided by the government and historically low mortgage rates, offsetting record unemployment triggered by the COVID-19 pandemic. According to Nationwide Building Society, UK house prices witnessed their first annual decline for the 12 months ended June. On a positive note, house prices bounced back in July and observed their highest monthly rise in more than 16 years in August. This represents an unexpectedly rapid recovery in the housing market since the easing of lockdown measures.

## risk rating

Very Low Low Low/Medium Medium Medium/High High Very High

All investments carry a level of risk. You need to decide how much of each type of risk you're prepared to take. The table below gives an overview of some of the risks associated with this fund.

risk type	description of risk	level of risk for this fund
<b>Capital Risk</b>	This is the risk that the value of your investments will fall. The younger you are, the less worried you might be about capital risk, because your investments have time to recover their value before your retire.	Med High
<b>Inflation Risk</b>	This is the risk that the value of your investments will grow more slowly than prices rise. Inflation can be a problem for pension savings invested in cash funds particularly if the interest you're earning is less than the rate of inflation.	Med
<b>Pension Conversion Risk</b>	The price of an annuity changes on a regular basis. This means that the amount of income you can secure with the same amount of money will change. Pension conversion risk is the risk that the amount of income you can buy drops before you retire, because your money is invested differently to annuity funds. That's why putting more of your DC pension pot into bonds to try to match annuity prices as you get closer to retirement age can help protect against this risk.	High

## About the factsheet

It is important to remember that the price of units can go down as well as up. There's no guarantee that you'll get back the amount that goes into your DC pension pot. Changes in rates of currency exchange, particularly where overseas securities are held, could also affect the value of your investment.

Although the funds can typically be bought and sold on a daily basis, if an exceptional amount of withdrawals are requested, the fund manager may need to delay when you can access your holdings. All funds are provided through FIL Life Insurance Ltd and may invest in securities issued by or hold deposits with HSBC Holdings plc and associated companies.

The Trustee can change the underlying managers or funds at any time without member consent or prior notification.

**Valuation time:** Business days at 5:00pm (UK time)

**Dealing Process:** The cut off time for switch instructions is 2:00pm each business day.
