Market Commentary

Emerging markets delivered positive returns in the first quarter of 2021. Markets started on a strong note, on hopes of increased fiscal stimulus, the rollout of the COVID-19 vaccine, and the US Federal Reserve's cautious stance. As the quarter progressed, concerns over high valuations and rising US Treasury yields triggered a sell-off in riskier assets. Rising COVID-19 cases and expectations of renewed lockdowns in some countries also hurt investor sentiment. Oil prices rose due to the vaccine rollout on the demand side and production cuts by the Organization of the Petroleum Exporting Countries (OPEC) on the supply side. The benefits of rising commodity prices were felt in the emerging Europe, Middle East and Africa (EMEA) region, as it outperformed broader emerging markets. South African stocks rallied as the rand strengthened against the US dollar after its central bank decided to keep interest rates at a historic low of 3.5%. Taiwan was the best performing market in emerging Asia, led higher by technology stocks. Indian equities performed strongly on the back of an expansionary and growth-focused union budget for 2021. On the downside, Chinese securities retreated after its banking and insurance regulator warned about speculation in the domestic property sector. Source: Fidelity. Risk rating

● Very low
 ● Low
 ● Low/medium
 ● Medium
 ● Medium/high
 ● High
 ● Very high

All investments carry a level of risk. You need to decide how much of each type of risk you're prepared to take. The table below gives an overview of some of the risks associated with this fund

Risk type	Description of risk	Level of risk for this fund
Capital Risk	This is the risk that the value of your investments will fall. Investors in higher capital risk funds should expect to see above average growth over the long term, but might see big falls in value in the short term. The younger you are, the less worried you might be about capital risk, because your investments have time to recover their value before you retire. Higher capital risk funds may be less suitable if you are close to retirement and want more certainty.	
Inflation Risk	This is the risk that the value of your investments will grow more slowly than prices rise. Inflation can be a problem for pension savings invested in cash or bond funds particularly if the interest you're earning is less than the rate of inflation and you are some way from retirement.	
Pension Conversion Risk	The price of an annuity changes on a regular basis. This means that the amount of income you can secure with the same amount of money will change. Pension conversion risk is the risk that the amount of income you can buy drops before you retire, because your money is invested differently to annuity funds. That's why, if you wish to buy an annuity to provide a regular income through retirement, putting more of your DC pension pot into bonds to try to match annuity prices as you get closer to retirement age can help protect against this risk. If you wish to continue investing your pension savings during retirement and access drawdown then this is less of a concern.	

About the factsheet

It is important to remember that the price of units can go down as well as up. There's no guarantee that you'll get back the amount that goes into your DC pension pot. Changes in rates of currency exchange, particularly where overseas securities are held, could also affect the value of your investment. Although the funds can typically be bought and sold on a daily basis, if an exceptional amount of withdrawals are requested, the fund manager may need to delay when you can access your holdings. All funds are provided through FIL Life Insurance Ltd and may invest in securities issued by or hold deposits with HSBC Holdings plc and associated companies. The Trustee can change the underlying managers or funds within this fund, or decide to withdraw or replace the fund at any time, without member consent or prior notification. This factsheet should be read alongside the investment guide.

Making fund choices is an important decision that could have a significant effect on your benefits. This factsheet has been produced to provide you with fund information and is not designed to provide advice or a recommendation on the suitability of an investment for your personal financial circumstances. The Trustee cannot give you financial advice about your fund choices. Consider taking independent financial advice before making any investment decisions.

Valuation time: Business days at 5:00pm (UK time)

Dealing Process: The cut off time for switch instructions is 2:00pm each business day.
