

# the DC funds

Diversified Assets – **active**  
as at 31 December 2017

## fund objective

To provide long-term capital growth in excess of UK price inflation. The fund aims to have less capital risk than an equities based fund by investing in a broad range of asset classes including equities, bonds, and a range of alternative assets. The fund aims to perform in line with the benchmark, over the long-term.

### fund facts

**Launch date:**

4 October 2011

**Fund size:**

£347.21m

## market commentary

Global equities generated positive returns, supported by strengthening economic and corporate data across markets. Although uncertainty about the UK's ongoing negotiations with the European Union (EU) over the terms of its exit continued, the completion of the first phase of negotiations in December supported investor sentiment. The US Federal Reserve (Fed) raised interest rates and its forecast for US economic growth in 2018 at its December meeting. Equities generated largest positive returns, followed by commodities, property shares and bonds. Within fixed income markets, corporate bonds outperformed core government bonds, with spreads tightening in the investment grade segment. Returns in sterling terms were supported by its depreciation against the euro, but undermined by its appreciation against the dollar and the yen.

## risk rating

Very Low Low Low/Medium Medium Medium/High High Very High

All investments carry a level of risk. You need to decide how much of each type of risk you're prepared to take. The table below gives an overview of some of the risks associated with this fund.

risk type	description of risk	level of risk for this fund
<b>Capital Risk</b>	This is the risk that the value of your investments will fall. The younger you are, the less worried you might be about capital risk, because your investments have time to recover their value before your retire.	Med
<b>Inflation Risk</b>	This is the risk that the value of your investments will grow more slowly than prices rise. Inflation can be a problem for pension savings invested in cash funds particularly if the interest you're earning is less than the rate of inflation.	Med
<b>Pension Conversion Risk</b>	The price of an annuity changes on a regular basis. This means that the amount of income you can secure with the same amount of money will change. Pension conversion risk is the risk that the amount of income you can buy drops before you retire, because your money is invested differently to annuity funds. That's why putting more of your DC pension pot into bonds to try to match annuity prices as you get closer to retirement age can help protect against this risk.	High

## About the factsheet

It is important to remember that the price of units can go down as well as up. There's no guarantee that you'll get back the amount that goes into your DC pension pot. Changes in rates of currency exchange, particularly where overseas securities are held, could also affect the value of your investment.

All funds are provided through FIL Life Insurance Ltd and may invest in securities issued by or hold deposits with HSBC Holdings plc and associated companies.

The Trustee can change the underlying managers or funds at any time without member consent or prior notification.

**Valuation time:** Business days at 5:00pm (UK time)

**Dealing Process:** The cut off time for switch instructions is 2:00pm each business day.
