market commentary

Global equities generated positive performance over the first quarter of 2019 as the risk-off sentiment seen in the fourth quarter of 2018 receded. The accommodative monetary policy in major economies, progress on US-China trade talks and healthy corporate earnings supported equity markets. Notably, the US Federal Reserve (Fed) signalled a possible end to interest rate hikes in view of rising global economic risks. The European Central Bank announced the launch of a targeted subsidised lending programme in September 2019 and pushed back guidance for future interest rate hikes. China also announced measures such as a reduction in banks' reserve requirement ratios and tax cuts to support growth. Meanwhile, the UK delayed Brexit after politicians rejected deals to withdraw from the European Union. Against this backdrop, all key markets ended higher, with equities in the US and Pacific ex Japan rising significantly. Emerging markets also performed well, but lagged developed markets.

risk rating

Very Low Low Low/Medium Medium Medium/High High Very High

All investments carry a level of risk. You need to decide how much of each type of risk you're prepared to take. The table below gives an overview of some of the risks associated with this fund.

risk type	description of risk	level of risk for this fund
Capital Risk	This is the risk that the value of your investments will fall. The younger you are, the less worried you might be about capital risk, because your investments have time to recover their value before your retire.	High
Inflation Risk	This is the risk that the value of your investments will grow more slowly than prices rise. Inflation can be a problem for pension savings invested in cash funds particularly if the interest you're earning is less than the rate of inflation.	Med
Pension Conversion Risk	The price of an annuity changes on a regular basis. This means that the amount of income you can secure with the same amount of money will change. Pension conversion risk is the risk that the amount of income you can buy drops before you retire, because your money is invested differently to annuity funds. That's why putting more of your DC pension pot into bonds to try to match annuity prices as you get closer to retirement age can help protect against this risk.	High

About the factsheet

It is important to remember that the price of units can go down as well as up. There's no guarantee that you'll get back the amount that goes into your DC pension pot. Changes in rates of currency exchange, particularly where overseas securities are held, could also affect the value of your investment.

All funds are provided through FIL Life Insurance Ltd and may invest in securities issued by or hold deposits with HSBC Holdings plc and associated companies.

The Trustee can change the underlying managers or funds at any time without member consent or prior notification.

Valuation time: Business days at 5:00pm (UK time)

Dealing Process: The cut off time for switch instructions is 2:00pm each business day.
