

# the DC funds

Diversified Assets – **active**  
as at 31 March 2018

## fund objective

To provide long-term capital growth in excess of UK price inflation. The fund aims to have less capital risk than an equities based fund by investing in a broad range of asset classes including equities, bonds, and a range of alternative assets. The fund aims to perform in line with the benchmark, over the long-term.

### fund facts

**Launch date:**

4 October 2011

**Fund size:**

£358.14m

## market commentary

All asset classes generated negative returns. Property shares fell the most, followed by equities, commodities and bonds. Within fixed income markets, corporate bonds underperformed government bonds. Returns in sterling terms were supported by its depreciation against the yen, but undermined by its appreciation against the US dollar and the euro. For Global Equities, higher US wage growth led to fears of faster interest rate hikes by the US Federal Reserve (Fed), while the increase in tariffs by the US government sparked concerns about the possibility of trade wars. Elsewhere, the European Central Bank (ECB) retained its accommodative monetary policy. Uncertainty about the UK's negotiations with the European Union (EU) over the terms of its exit continued. Against this backdrop, all regions generated negative returns over the period.

## risk rating

Very Low Low Low/Medium Medium Medium/High High Very High

All investments carry a level of risk. You need to decide how much of each type of risk you're prepared to take. The table below gives an overview of some of the risks associated with this fund.

risk type	description of risk	level of risk for this fund
<b>Capital Risk</b>	This is the risk that the value of your investments will fall. The younger you are, the less worried you might be about capital risk, because your investments have time to recover their value before your retire.	Med
<b>Inflation Risk</b>	This is the risk that the value of your investments will grow more slowly than prices rise. Inflation can be a problem for pension savings invested in cash funds particularly if the interest you're earning is less than the rate of inflation.	Med
<b>Pension Conversion Risk</b>	The price of an annuity changes on a regular basis. This means that the amount of income you can secure with the same amount of money will change. Pension conversion risk is the risk that the amount of income you can buy drops before you retire, because your money is invested differently to annuity funds. That's why putting more of your DC pension pot into bonds to try to match annuity prices as you get closer to retirement age can help protect against this risk.	High

## About the factsheet

It is important to remember that the price of units can go down as well as up. There's no guarantee that you'll get back the amount that goes into your DC pension pot. Changes in rates of currency exchange, particularly where overseas securities are held, could also affect the value of your investment.

All funds are provided through FIL Life Insurance Ltd and may invest in securities issued by or hold deposits with HSBC Holdings plc and associated companies.

The Trustee can change the underlying managers or funds at any time without member consent or prior notification.

**Valuation time:** Business days at 5:00pm (UK time)

**Dealing Process:** The cut off time for switch instructions is 2:00pm each business day.
